

NetStop 5.0

From online banking to human resources applications, Public Access Terminals – Kiosks – are transforming the way business is done today. With more than 461,000 kiosks in use world wide, and growing at a rapid 17% per year, kiosks are radically enhancing the convenience factor for millions of people.

Kiosk Logix has been at the center since 1997 with our secure browser, NetStop, setting the bar for the rest of the kiosk industry.

Today, Kiosk Logix is not only a leader in kiosk browsers, but also offers a full suite of cutting edge software products to monitor and manage your kiosk networks remotely.

Secure, Reliable And Customizable

NetStop 5.0, a Windows-based kiosk browser, protects the hard drive of your kiosk, preventing access to the operating system and other data that you require to be tamper proof.

NetStop 5.0 allows restricted access to up to 25 stand alone applications, including Microsoft Office.

Best of all, NetStop is simple to install and use. Its icon based interface and intuitive commands permit easy installation and configuration without expensive training.

NetStop is possibly the only kiosk browser on the market to incorporate a full featured design module to enable you to customize your kiosk screen. Create custom user interfaces for your kiosks with full screen image backgrounds, graphical image buttons, video, animations, sound, and more.

NetStop has a built in remote monitoring capability: it is designed to periodically report back to a designated remote location on its status. Failure to report indicates a problem with the kiosk or the internet connection. Kiosk Logix also offers a suite of feature-rich remote monitoring and management utilities.

With such powerful features, delivered at an affordable price, it is no surprise that NetStop is the market leader with more than 21,000 locations in use across 61 countries worldwide. Check it out today.
